

RECALCULATED ORBITS OF 8 DOUBLE STARS

D. Olević, G. Popović and P. Jovanović

Astronomical Observatory, Volgina 7, 11160 Belgrade-74, Yugoslavia

(Received: November 7, 2000)

SUMMARY: The authors present new orbital elements for the following pairs: ADS 1227, ADS 3317, ADS 8128, ADS 8239, ADS 8242, ADS 8539, ADS 8949 and McA 61. Individual masses for these pairs are also calculated. For the pairs ADS 8128, ADS 8239, ADS 8539 and ADS 8949 calculated parallaxes are in accordance with the corresponding parallaxes of the Hipparchos Program.

1. INTRODUCTION

The latest observations of the pairs ADS 1227, ADS 3317, ADS 8128, ADS 8239, ADS 8242, ADS 8539, ADS 8949 and McA 61 show that the residuals (O - C) calculated from the previous elements are significant. For this reason we performed calculation of new orbital elements for the above pairs.

2. RESULTS

In Table 1. are given:

- a) Basic information about the pairs,
- b) Classical and vectorial orbital elements and
- c) Absolute magnitudes.

Masses and parallaxes are given for the pairs located on the main sequence of H-R diagram. The

calculation is performed using the equation from Angelov (1993) and Angelov (1996). The ephemeris are given in Table 2 and graphical presentation of the calculated orbits and used observations is given in Figs. 1 – 8. The above results are also published in the IAU Circ. No. 141.

3. CONCLUSION

The obtained dynamical parallaxes (π_{dyn}) are in good accordance with Hipparchos results.

Acknowledgements – This work is a part of the project "Astrometrical, Astrodynamical and Astrophysical investigations", supported by Ministry of Science and Technology of Serbia.

Претходно саопштење

Аутори овог рада дају нове путањске елементе за следеће двојне звезде: ADS 1227, ADS 3317, ADS 8128, ADS 8239, ADS 8242, ADS 8539, ADS 8949 и McA 61. За парове ADS 8128,

ADS 8239, ADS 8539 и ADS 8949 израчунате су и паралаксе које се добро слажу са резултатима Hipparchos програма, као и појединачне масе система.
